REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Re claim 1; the prior art of record, and in particular Parkin (US 5,583,727 A), Chou (5,820,769 A), and Litvinov et al (US 6,660,357 B1), fails to teach or suggest that each cell in an island comprising at least two stacked magnetic cells is a single magnetic domain having a magnetic moment oriented in one of two opposite directions substantially perpendicular to the substrate, the cell closest to the substrate in each of the islands having a coercivity greater than the other cells in the islands; applying to an island a magnetic field greater than the coercivity of the cell farthest from the substrate to switch the orientation of the magnetic moment of the farthest cell in that island without switching the orientation of the magnetic moment of the cell closest to the substrate in that island; and applying to an island the magnetic field while heating that island to switch the orientations of all the cells in that island.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. The prior art of record and not relied upon is considered pertinent to applicant's disclosure.

Litvinov et al (US 6,660,357 B1) teach a perpendicular recording medium having a soft magnetic underlayer including at least two soft magnetic layers separated by a thin non-magnetic layer.

Art Unit: 2651

Fullerton et al (US 6,391,430 B1) teach a magnetic recording disk patterned into discrete magnetic and nonmagnetic regions, whereby the magnetic layer consists of first and second films antiferromagnetically coupled. Ions irradiated through a patterned mask destroy the antiferromagnetic coupling between the two films.

Yamane et al (US 5,844,755 A) teach a giant magnetoresistive medium having a pair of ferromagnetic layers, a nonmagnetic layer, and an antiferromagnetic layer.
